Summary

Full Stack Web Developer with a solid foundation in the MERN stack (React.js, Node.js, Express.js, MongoDB). Experienced in building functional web applications, developing RESTful APIs, implementing JWT-based authentication and authorization, and following client-server architecture principles. Strong problem-solving ability with a foundation in Java and core software engineering concepts, focused on clean code, performance optimization, and continuous learning.

Skills

Programming Languages: JavaScript (ES6+), Java, C

Frontend Technologies: HTML5, CSS3, React.js, Redux, Tailwind CSS, Bootstrap

Backend Technologies: Node.js, Express.js, RESTful APIs, Middleware, Authentication & Authorization

Databases: MongoDB, MySQL

Tools & Platforms: Git, GitHub, Postman, Visual Studio Code

Projects

VisionBoard Pro 🔗

December 2025 – January 2026

- Developed a **full-stack MERN** web application enabling users to perform **CRUD operations** on structured notes using a **client-server architecture**.
- Designed and implemented **RESTful APIs** using proper HTTP methods and status codes, with middleware-based input validation and centralized error handling to ensure reliable request-response flow.
- Implemented **Redis-based sliding window rate limiting (10 requests per 20 seconds)** using **Upstash Redis** to demonstrate real-world **backend scalability**, security, and traffic control concepts.
- Tested and debugged **APIs** using **Postman**, ensuring reliable API integration and consistent backend behavior.

Personal Portfolio Website 🔗

November 2025 – December 2025

- Designed and developed a fully responsive **single-page application (SPA)** using React.js and Vite, implementing **4 modular and reusable components** — Hero, About, Projects, and Contact — to ensure maintainability and scalability.
- Built a modern and accessible **user interface (UI)** using Tailwind CSS with fluid layouts and custom animations to enhance **user experience (UX)** across all devices.
- Integrated **EmailJS** to implement a functional contact form with **client-side email delivery**, eliminating backend dependencies while ensuring reliable message handling.

EchoStream – Real-Time Video Calling & Chat Platform 🔗

March 2025 – May 2025

- Built a **MERN** stack real-time communication platform focused on global language exchange featuring **4 core modules** - user onboarding, user profiles, real-time chat, and video calling — using scalable client-server architecture.
- Implemented **JWT-based authentication and authorization** with protected routes and secure access control.
- Integrated real-time messaging and low-latency **WebRTC** video calling to support seamless communication.
- Designed and implemented **10+ RESTful API endpoints** across authentication, user management, and chat modules, tested APIs for reliability using Postman, and built a customizable responsive UI with **32 themes** using custom **React hooks** and industry best practices, deployed to production.

Certifications

- **Certified Web Development Course – Apna College (2025):** Completed a full-stack web development program with practical experience in frontend and backend technologies. 🔗
- **C Programming – IIT Kanpur (2021):** Completed a comprehensive C programming course covering fundamental programming concepts and data structures. 🔗

Education

Bachelor of Technology (B.Tech.) in Computer Science

S.D. College of Engineering and Technology (AKTU)

Graduated: 2025

Muzaffarnagar, India
